Mr. Morrow – Thank you for your response, we appreciate your teams diligence in response to this project at AltEn.

We are happy to hear that a temporary means to stop the flow/migration has been successful in temporarily halting the spread. As our (my in-laws) property is part of the drainage path for any flow that is not absorbed, our concern is for when the current snow begins to melt and runoff. If you could please ensure that we are kept abreast of any changes or concerns could impact our pond/land. This pond is a great fishing/waterfowl habitat that we would not like to be impacted. Should a water quality test be taken now to establish a baseline to test against future contamination?

Mr. Whitehead:

I have reviewed the information you provided and compared it to the most recent reports from the site. As of yesterday morning the migration of the spill had not yet made it to Highway 66 as it turns south. The facility placed materials in this location that is intended to block further migration.

The current weather conditions are slowing the investigation and response. However, I am hopeful that the spill has been contained 1.5 miles west of the location of the pond indicated in your attachment.

Your observations and concerns will be recorded and forwarded to the NDEE Inspection and Compliance Division for further evaluation.

Sincerely,

Kirk Morrow, P.G.

Steve & Dennis,

Please see the attached image. My in-laws farmstead with a private pond and dam is in the path of the Alt Energy Spill. Can you forward this to the appropriate person from NDEE that is working on this spill. My in-laws are very concerned about this ultimately reaching their pond and continuing downstream. We have heard reports that the spill has reached the intersection of County Road 7 & G (see arrow on image).

If you could give the appropriate person my contact information and ask them to let me know if we should be concerned and if there is anything we can do to prevent this from reaching their pond.

Thanks,

Doug
