RE: Site visit

February 2, 2021, I, Rachel Neisius conducted air quality monitoring in the Mead area at 1:45 pm. Investigation was conducted in response to continuing concerns from area residents smelling foul odors and improper use of wet cake. It was 27 °F, cloudy, with winds out of the SE at approximately 5-10mph.

Observations:

- 1) I drove Road 10 past the facility, and saw multiple semis with hopper style trailers sitting at the facility, and one semi with a side dump trailer moving on the facility.
- 2) I could smell foul odors when driving past the facility.
- 3) I saw a green tinge on both the east and west ends of the northern large Quonset building. The green tinge coated the roof of the east end of the building, and mostly just the overhead door of the west end of the building. I saw the green tinge on the ground on the east end of the building, and on the snow on the ground.
- 4) I stopped and viewed the facility from county road K, so I could see the entrance of the facility. I saw no semis leave the facility, and one semi with a grain-type trailer arrive during the time I was there.
- 5) I saw no activity near the wet cake pile while I was monitoring.
- 6) I saw a metal shipping container and two small augers by the wet cake pile. They seem to be in the same place as the prior visit on 1/27/21.
- 7) I left the site at about 2:15 pm.
