AltEn Field Observations

March 8, 2021

Dave Bubb

NDEE

Observations of the hoop barns.

Observations started at approximately 1430 and ended at 1515.

South hoop barn.

Facing west. In foreground are bags of seed corn on pallets. To the left are empty seed corn bags. To the right side of the photo are bags of starch on pallets. Towards the west end, or towards the back of the photo, are pallets of beer and wine in factory packaging.

20210023867

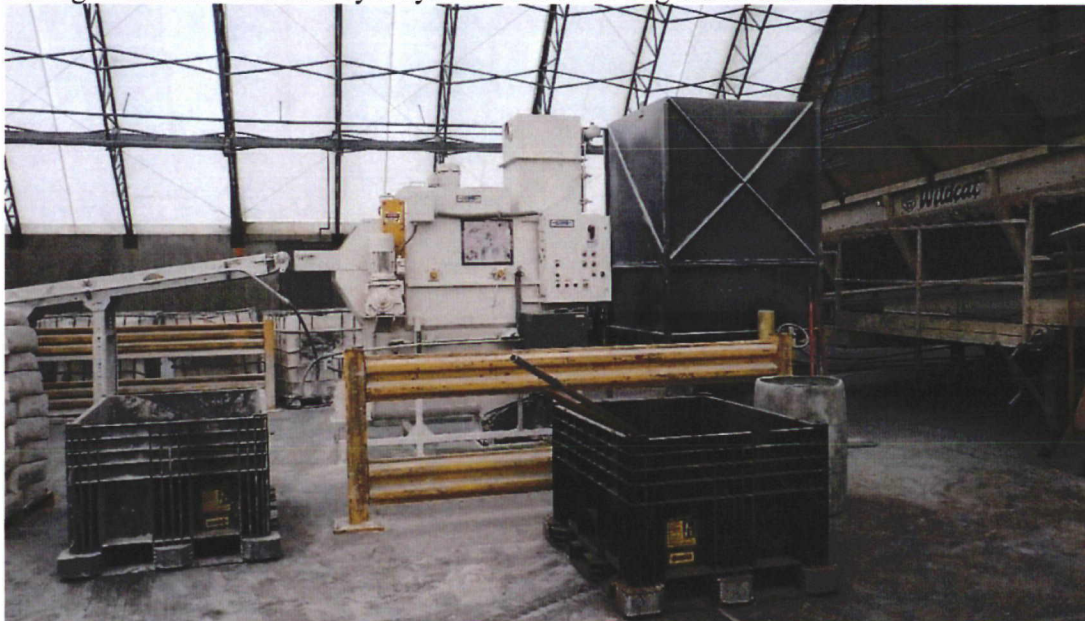

Facing west. Bags of seed corn on pallets on the left side of photo. Bags of starch on pallets towards the right side of photo and straight back, or center of photo.

Facing northwest. Bags of starch on pallets. A blue conveyor in the background.

Facing north. Part of a conveyor system used to de-bag starch and seed corn.

Facing east. Part of a conveyor system to de-bag starch and seed corn.

Towards the west side of the building facing north. Outdated cases of beer and wine on pallets.

West end of the building facing southwest. Outdated cases of wine on pallets.

West side of the building facing northeast. Outdated cases of beer on pallets. In the background are bins and bags of seed corn.

From the west side of the building facing east along the south wall. In the foreground on the right side are cases of outdated wine on pallets. Towards the background on the right side are bins of empty containers for recycling. Left side of photo are pallets of outdated beer.

From the west side of the building facing east along the north wall. In the foreground are bins for recycling material left over from empty alcohol containers. On the right side of the picture are cases of beer with seed corn behind it and bags of starch on both the left and right side of the photo.

Near the middle of the building facing southeast. Bags and bins of seed corn.

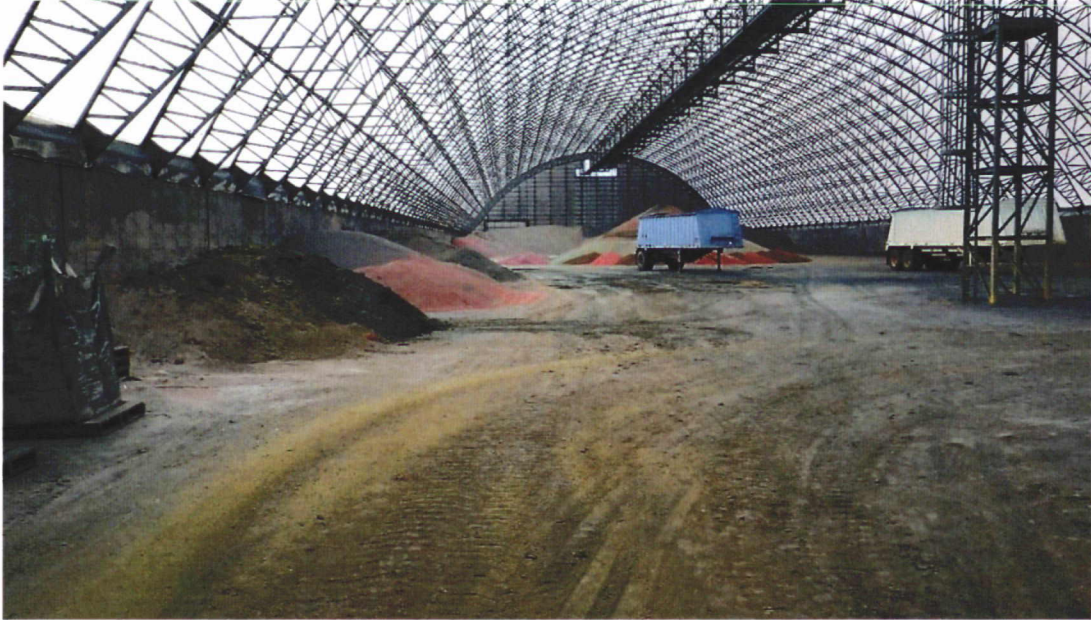

Facing east. Middle of photo is bags of starch on pallets. Left side of photo are bags of starch and empty bags. The right side of photo are bags of seed corn on pallets.

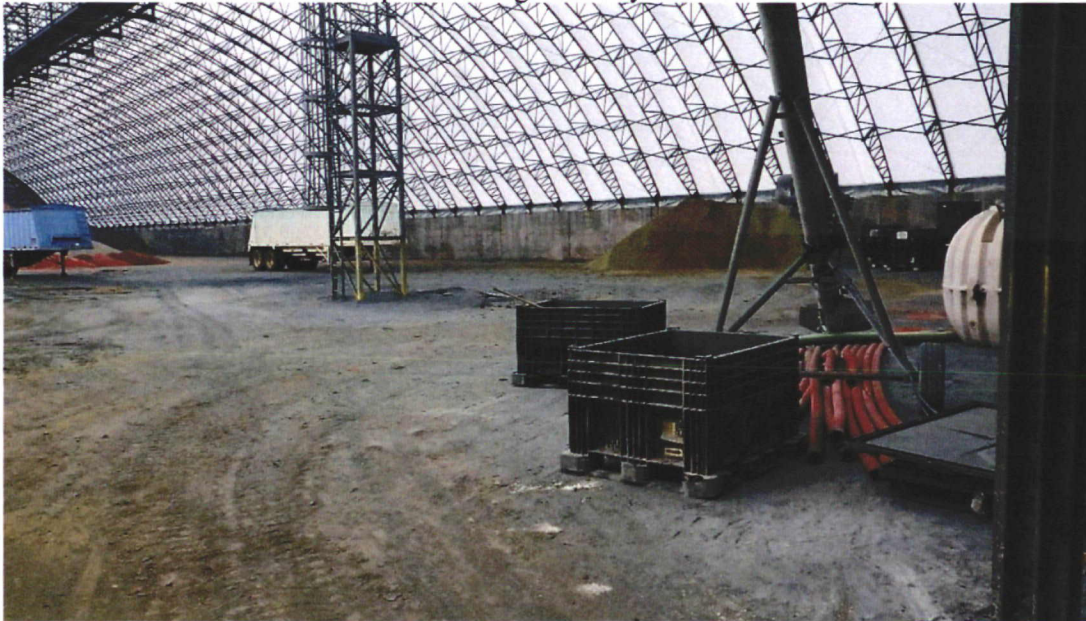

North hoop barn.

Facing west towards the south side of the building. De-bagged seed corn. The different colors of corn are different brands or varieties. The cement floor and side walls of the building are coated in a green material.

Facing northeast. Note tower towards center of photo. Underneath the tower is a conveyor system to move product to the east end of the building. I believe the pile of seed towards the middle of the photo is degraded soy beans.

Additional notes:

After making observations of the drainage and release/spill area (documented in a separate report), I went to the AltEn facility to observe inside the hoop barns. I contacted Ken Peterson who assigned an AltEn employee, Travis Muzney to accompany me.

After I finished making observations of the two buildings I briefly spoke to Ken Peterson then concluded my visit.
