AltEn Field Observations
March 14, 2021
Tom Buell
NDEE

On Sunday, March 14, 2021 I made the following observations of the AltEn facility. At the time of the observations it was raining and very windy. I did not make contact with the facility.

-At 10:30am I stopped at "Stop 3", which is located at the intersection of Hwy 66 and Road 7. The culvert plug/packer had been removed and there was water flowing through the culvert. The water was clear.

-At 10:45am I observed "Stop 5" which is located at the intersection of County Road 9 and Road J. The berms had been removed and water was flowing in the drainage.

-At 10:48 I drove past the facility on Road 10 and took the photo below. Water was flowing over the stormwater berm. Following this observation I left the area. After I left the facility I contact Brad Pracheil, NDEE Inspection and Compliance Division Administrator, to discuss my findings. Brad said he would contact the facility to notify them of our stormwater concerns.
