

# Groundwater Monitoring and Protocols

David L. Miesbach, PG  
Groundwater Unit Supervisor  
NDEQ

March 22, 2012  
Lincoln, NE

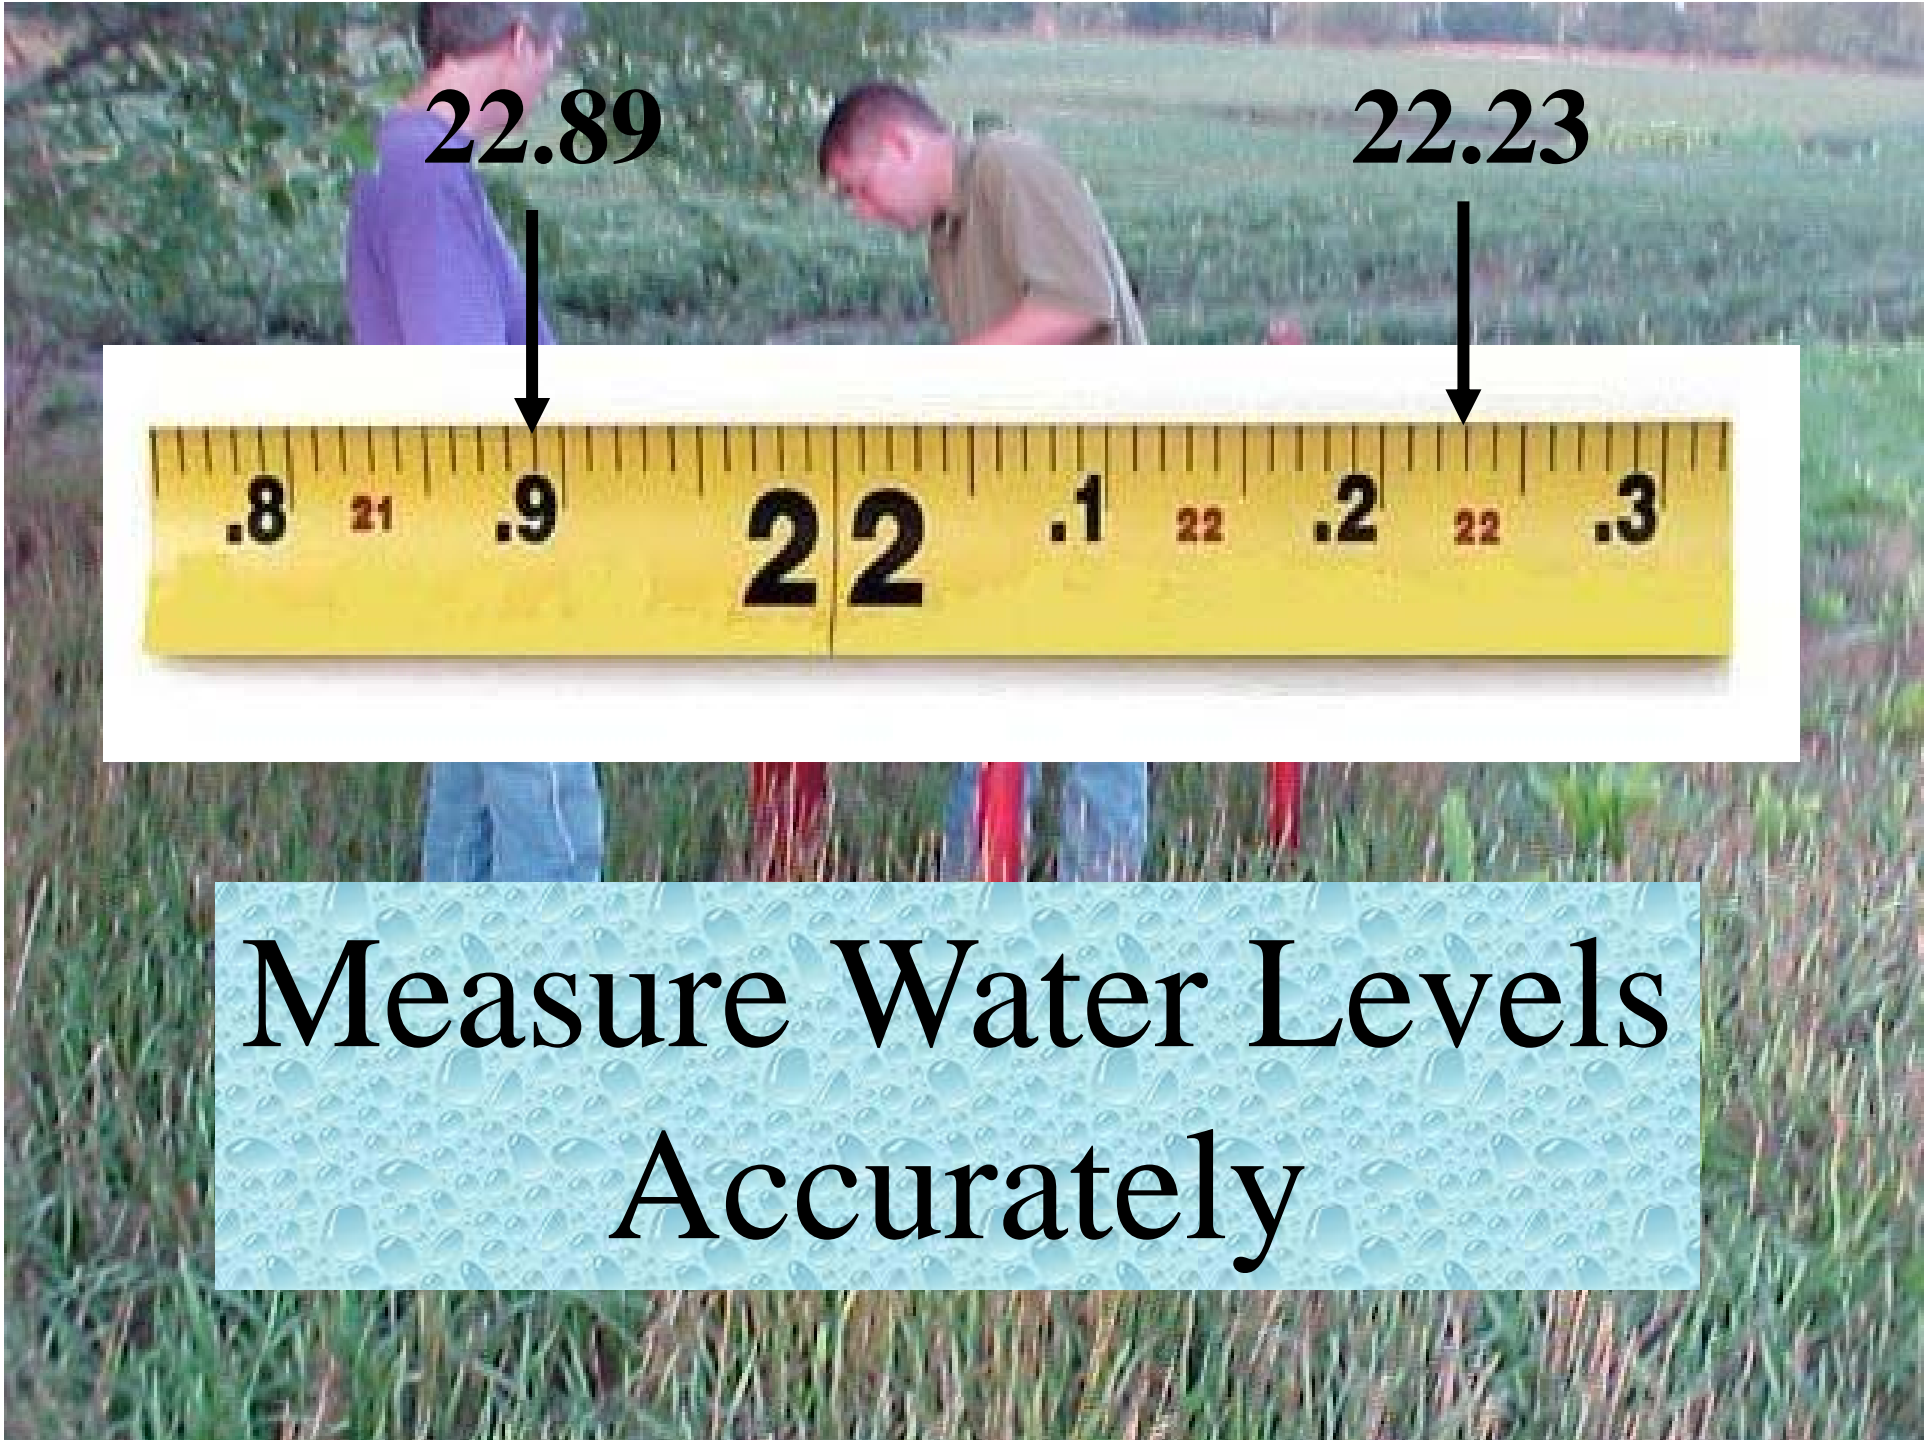

- SOPs
- QAPPs
- Methods

**Follow a Sampling Plan!**

# Who Can Open Wells?

- Water Well Monitoring Technician
- Natural Resources Groundwater Technician
- Pump Installation Supervisor/Contractor
- State Electrical Inspector
- Licensed Water Operator (city wells)
- Owner of the well (must live there)

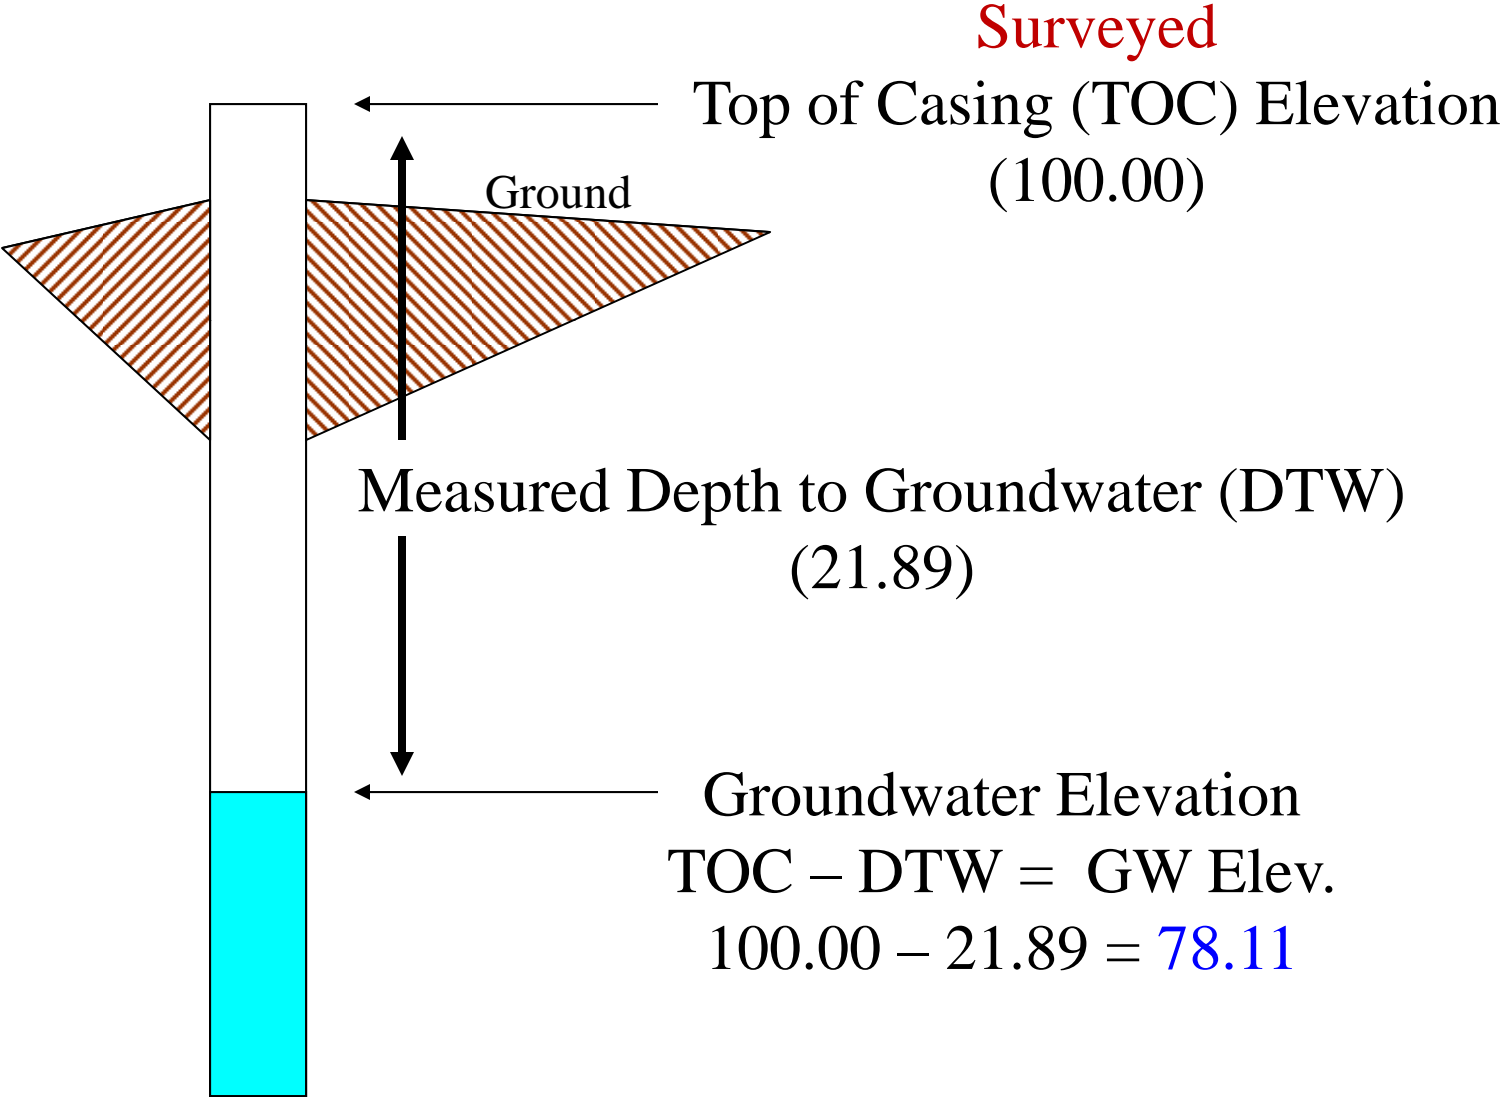

22.89

22.23

Measure Water Levels  
Accurately

# Converting water level to water elevation

# Collecting Field Parameters

**Stabilized** – 2 consecutive readings within 10% of each other (pH, conductivity, temp.).

## Example

Temperature = 12° C

Calculate 10%       $12 \div 10 = \mathbf{1.2}$

Calculate range     $12 - 1.2 = \mathbf{10.8}$

$12 + 1.2 = \mathbf{13.2}$

Next 2 temperatures should fall between

**10.8 and 13.2**

in order to be stabilized

**Must be done for low flow and purging methods**

# Why Purge?

# Calculating Well Volume

$$32.78 - 27.86 = 4.92$$

**2-inch diameter well casing**

$$4.92 \text{ ft} \times 0.17 \text{ gal/ft} = 0.8 \text{ gals}$$

$$0.8 \text{ gals} \times 3 = 2.4 \text{ gals}$$

$$0.8 \text{ gals} \times 5 = 4.0 \text{ gals}$$

## Volume of Schedule 40 PVC Pipe

Pipe Diameter	Gallon/Linear Foot
2-inch	0.17
4-inch	0.66
6-inch	1.5
8-inch	2.6

# Why Not Purge?

- Long Screens
- Large Dia. Casing
- Discrete Sample

11.29.2011

- 
- Field Sheets
  - COC
  - Labels

Fill Out Paperwork by Hand

# Preserve Samples Properly

pH  
Temp

# Quality Assurance/Quality Control (QA/QC)

- Field Blanks
- Duplicates
- Instrument Calibration
- Laboratory QA/QC

# THE END
