## PROVISIONS FOR LANDLORD/PROPRTY OWNER PERMISSION

I furthermore do hereby give permission for the property to be weatherized according to the Department of Energy (DOE) standards and regulations and for the inspection of the home and the work performed by the Agency Weatherization Program. As part of this service, all units will receive a heating system efficiency inspection. The weatherization services and the heating system efficiency inspection will be performed at no cost to the owner/landlord or tenant in single unit dwellings. In the case of heating plant repairs, the Agency Weatherization Program share will not exceed \$500.00. If the repairs do not exceed \$500.00, and the replacement of the unit is not shown as cost-effective on the energy audit, the Agency Weatherization Program will repair the heating plant. Should the repairs exceed \$500.00 the Agency Weatherization Program will contact the owner or authorized agent to have the heating plant replaced. The Agency Weatherization Program will contribute \$1,500.00 toward the required replacement, if installed to meet the Nebraska Energy Weatherization Assistance Program specifications. If deficiencies are found with the water heater, and the replacement of the unit is not shown as cost-effective on the energy audit, the owner shall repair or replace the water heater. The Weatherization Program may contribute a maximum of \$500.00 if Weatherization Program installation requirements are met. The

weatherization of the unit will not commence until such time as the furnace and/or water heater have been made safe and operable. Weatherization work on rental units may be a shared responsibility of the owner/landlord and the Agency Weatherization Program.

Additionally, I have received information regarding the findings of U.S. Department of Energy's national field study of indoor air quality in homes treated under the Weatherization Assistance Program and I understand and agree to the implementation of the precautionary measures that may be completed in the home to reduce the possibility of exacerbating any potential radon issues.

□ Yes □ No

Weatherization materials may include, but are not limited to, the following items: insulation, caulking, glazing, weather stripping, door sweeps, thresholds, primary doors and primary windows, pipe wrap, water heater blankets, venting, minor repairs, and glass replacement. The decisions concerning material type and quantity shall be the responsibility of the Agency providing the service. The determination for the type of work to be implemented on your home is solely based on the completion of an inspection and energy audit that accesses how much energy can be saved with implementation and which work provides a costeffective savings-to-investment ratio (SIR).
